

Datenmodell und Abfragen

Datenmodell

- Collection measurings
- Beispiel:

```
{
    "timestamp" : 1314277800000, // Unix-Timestamp (long)
    "value" : 1337, // numerischer Wert (int)
    "stationID : "23", // Anlagenname (string)
    "partID" : "wr", // Bauteilart (string)
    "serialNo : 42, // laufende Nummer (int)
    "datatype" : "gain", // Datenart (string)
    "opt1" : "string" // Zeichenkette bei upc, pdc
    "opt2" : 0 // laufende Nummer bei upc, pdc
}
```

Datenmodell

- Collection stations
- Beispiel:

```
{
    "stationID": "23", // Identifier (string)
    "version" : 1, // Versionierung
    … // Metadaten
}
```

Abfrage:

```
db.stations.find({,,stationID": 23}).sort({,,version": -1}.limit(1);
```

Abfragen
